engineering**

Author Index of Volume 152

- Argyris, J., Tenek, L. and Mattsson, A. BEC: A 2-node fast converging shear-deformable isotropic and composite beam element based on 6 rigid-body and 6 straining modes 281–336
Ata, M. see Loughlan, J. 373–393
- Babuška, I. and Zhang, Z. The partition of unity method for the elastically supported beam 1– 18
- Bao, H., Bielak, J., Ghattas, O., Kallivokas, L.F., O'Hallaron, D.R., Shewchuk, J.R. and Xu, J. Large-scale simulation of elastic wave propagation in heterogeneous media on parallel computers 85–102
- Belytschko, T. see Ponthot, J.-P. 19– 46
- Bielak, J. see Bao, H. 85–102
- Bramble, J.H., Lazarov, R.D. and Pasciak, J.E. Least-squares for second-order elliptic problems 195–210
- Brookes, P.J. see Morgan, K. 157–174
- Chandrupatla, T.R. An efficient quadratic fit—Sectioning algorithm for minimization without derivatives 211–217
- Chen, Z.S., Hofstetter, G. and Mang, H.A. A Galerkin-type BE-FE formulation for elasto-acoustic coupling 147–155
- Demkowicz, L. and Vardapetyan, L. Modeling of electromagnetic absorption/scattering problems using hp-adaptive finite elements 103–124
- Destuynder, P. and Salaün, M. Approximation of shell geometry for non-linear analysis 393–430
- Donning, B.M. and Liu, W.K. Meshless methods for shear-deformable beams and plates 47– 71
- Elishakoff, I. see Qiu, Z. 361–372
- Ewing, R.E., Sævareid, O. and Shen, J. Discretization schemes on triangular grids 219–238
- Gerdes, K. The conjugated vs. the unconjugated infinite element method for the Helmholtz equation in exterior domains 125–145
- Ghattas, O. see Bao, H. 85–102
- Gi Kim, J. see Oh, H.-S. 259–280
- Hassan, O. see Morgan, K. 157–174
- Hofstetter, G. see Chen, Z.S. 147–155
- Jiang, B.-N. On the least-squares method 239–257
- Kallivokas, L.F. see Bao, H. 85–102

- Khan, L.A. and Liu, P.L.-F. Numerical analyses of operator-splitting algorithms for the two-dimensional advection-diffusion equation 337-359
- Lazarov, R.D. see Bramble, J.H. 195-210
- Liu, P.L.-F. see Khan, L.A. 337-359
- Liu, W.K. see Donning, B.M. 47- 71
- Loughlan, J. and Ata, M. The analysis of carbon fibre composite box beams subjected to torsion with variable twist 373-393
- Mang, H.A. see Chen, Z.S. 147-155
- Mattsson, A. see Argyris, J. 281-336
- Morgan, K., Brookes, P.J., Hassan, O. and Weatherill, N.P. Parallel processing for the simulation of problems involving scattering of electromagnetic waves 157-174
- Oh, H.-S., Gi Kim, J. and Sup Yum, S. The weighted finite element method for elasticity equations on unbounded domains 259-280
- Oñate, E. see Taylor, R.L. 73- 84
- O'Hallaron, D.R. see Bao, H. 85-102
- Pasciak, J.E. see Bramble, J.H. 195-210
- Ponthot, J.-P. and Belytschko, T. Arbitrary Lagrangian-Eulerian formulation for element-free Galerkin method 19- 46
- Qiu, Z. and Elishakoff, I. Antioptimization of structures with large uncertain-but-non-random parameters via interval analysis 361-372
- Safjan, A.J. Highly accurate non-reflecting boundary conditions for finite element simulations of transient acoustics problems 175-193
- Salaün, M. see Destuynder, P. 393-430
- Shen, J. see Ewing, R.E. 219-238
- Shewchuk, J.R. see Bao, H. 85-102
- Sup Yum, S. see Oh, H.-S. 259-280
- Sævareid, O. see Ewing, R.E. 219-238
- Taylor, R.L., Zienkiewicz, O.C. and Oñate, E. A hierarchical finite element method based on the partition of unity 73- 84
- Tenek, L. see Argyris, J. 281-336
- Vardapetyan, L. see Demkowicz, L. 103-124
- Weatherill, N.P. see Morgan, K. 157-174
- Xu, J. see Bao, H. 85-102
- Zhang, Z. see Babuška, I. 1- 18
- Zienkiewicz, O.C. see Taylor, R.L. 73- 84

**Computer methods
in applied
mechanics and
engineering**

Subject Index of Volume 152

New Head Please Supply

- Least-squares for second-order elliptic problems, J.H. Bramble, R.D. Lazarov and J.E. Pasciak 195–210
- On the least-squares method, B.-N. Jiang 239–257

Boundary element methods

- A Galerkin-type BE-FE formulation for elasto-acoustic coupling, Z.S. Chen, G. Hofstetter and H.A. Mang 147–155

Coupled problems

- The conjugated vs. the unconjugated infinite element method for the Helmholtz equation in exterior domains, K. Gerdes 125–145
- BEC: A 2-node fast converging shear-deformable isotropic and composite beam element based on 6 rigid-body and 6 straining modes, J. Argyris, L. Tenek and A. Mattson 281–336
- Approximation of shell geometry for non-linear analysis, P. Destuynder and M. Salaün 393–430

Elasticity

- The partition of unity method for the elastically supported beam, I. Babuška and Z. Zhang 1–18
- Meshless methods for shear-deformable beams and plates, B.M. Donning and W.K. Liu 47–71
- A hierarchical finite element method based on the partition of unity, R.L. Taylor, O.C. Zienkiewicz and E. Oñate 73–84
- Large-scale simulation of elastic wave propagation in heterogeneous media on parallel computers, H. Bao, J. Bielak, O. Ghattas, L.F. Kallivokas, D.R. O'Hallaron, J.R. Shewchuk and J. Xu 85–102
- A Galerkin-type BE-FE formulation for elasto-acoustic coupling, Z.S. Chen, G. Hofstetter and H.A. Mang 147–155
- The weighted finite element method for elasticity equations on unbounded domains, H.-S. Oh, J. Gi Kim and S. Sup Yum 259–280

Electromagnetic fields

- Modeling of electromagnetic absorption/scattering problems using *hp*-adaptive finite elements, L. Demkowicz and L. Vardapetyan 103–124
- Parallel processing for the simulation of problems involving scattering of electromagnetic waves, K. Morgan, P.J. Brookes, O. Hassan and N.P. Weatherill 999–999

Finite difference methods

- Discretization schemes on triangular grids, R.E. Ewing, O. Sævareid and J. Shen 219–238

Finite element and matrix methods

- The partition of unity method for the elastically supported beam, I. Babuška and Z. Zhang 1– 18
- Arbitrary Lagrangian–Eulerian formulation for element-free Galerkin method, J.-P. Ponthot and T. Belytschko 19– 46
- Meshless methods for shear-deformable beams and plates, B.M. Donning and W.K. Liu 47– 71
- A hierarchical finite element method based on the partition of unity, R.L. Taylor, O.C. Zienkiewicz and E. Oñate 73– 84
- Large-scale simulation of elastic wave propagation in heterogeneous media on parallel computers, H. Bao, J. Bielak, O. Ghattas, L.F. Kallivokas, D.R. O'Hallaron, J.R. Shewchuk and J. Xu 85–102
- Modeling of electromagnetic absorption/scattering problems using *hp*-adaptive finite elements, L. Demkowicz and L. Vardapetyan 103–124
- A Galerkin-type BE-FE formulation for elasto-acoustic coupling, Z.S. Chen, G. Hofstetter and H.A. Mang 147–155
- Parallel processing for the simulation of problems involving scattering of electromagnetic waves, K. Morgan, P.J. Brookes, O. Hassan and N.P. Weatherill 999–999
- Highly accurate non-reflecting boundary conditions for finite element simulations of transient acoustics problems, A.J. Safjan 175–193
- Least-squares for second-order elliptic problems, J.H. Bramble, R.D. Lazarov and J.E. Pasciak 195–210
- Discretization schemes on triangular grids, R.E. Ewing, O. Sævareid and J. Shen 219–238
- On the least-squares method, B.-N. Jiang 239–257
- The weighted finite element method for elasticity equations on unbounded domains, H.-S. Oh, J. Gi Kim and S. Sup Yum 259–280

Fracture mechanics

- Arbitrary Lagrangian–Eulerian formulation for element-free Galerkin method, J.-P. Ponthot and T. Belytschko 19– 46

Modern computer architecture

- Large-scale simulation of elastic wave propagation in heterogeneous media on parallel computers, H. Bao, J. Bielak, O. Ghattas, L.F. Kallivokas, D.R. O'Hallaron, J.R. Shewchuk and J. Xu 85–102
- Parallel processing for the simulation of problems involving scattering of electromagnetic waves, K. Morgan, P.J. Brookes, O. Hassan and N.P. Weatherill 999–999

Nonlinear mechanics

- Arbitrary Lagrangian–Eulerian formulation for element-free Galerkin method, J.-P. Ponthot and T. Belytschko 19– 46

Numerical solution procedures

- Numerical analyses of operator-splitting algorithms for the two-dimensional advection–diffusion equation, L.A. Khan and P.L.-F. Liu 337–359
- Antioptimization of structures with large uncertain-but-non-random parameters via interval analysis, Z. Qiu and I. Elishakoff 361–372

Optimization

- An efficient quadratic fit—Sectioning algorithm for minimization without derivatives, T.R. Chandrupatla 211–217

- Antioptimization of structures with large uncertain-but-non-random parameters via interval analysis, Z. Qiu and I. Elishakoff 361–372
- Shells and plates*
- Meshless methods for shear-deformable beams and plates, B.M. Donning and W.K. Liu 47– 71
- Solutions of ordinary and partial differential equations*
- The partition of unity method for the elastically supported beam, I. Babuška and Z. Zhang 1– 18
- A hierarchical finite element method based on the partition of unity, R.L. Taylor, O.C. Zienkiewicz and E. Oñate 73– 84
- Modeling of electromagnetic absorption/scattering problems using *hp*-adaptive finite elements, L. Demkowicz and L. Vardapetyan 103–124
- Least-squares for second-order elliptic problems, J.H. Bramble, R.D. Lazarov and J.E. Pasciak 195–210
- Discretization schemes on triangular grids, R.E. Ewing, O. Sævareid and J. Shen 219–238
- On the least-squares method, B.-N. Jiang 239–257
- The weighted finite element method for elasticity equations on unbounded domains, H.-S. Oh, J. Gi Kim and S. Sup Yum 259–280
- Numerical analyses of operator-splitting algorithms for the two-dimensional advection–diffusion equation, L.A. Khan and P.L.-F. Liu 337–359
- Structural mechanics*
- Antioptimization of structures with large uncertain-but-non-random parameters via interval analysis, Z. Qiu and I. Elishakoff 361–372
- The analysis of carbon fibre composite box beams subjected to torsion with variable twist, J. Loughlan and M. Ata 373–391
- Transport phenomena*
- Numerical analyses of operator-splitting algorithms for the two-dimensional advection–diffusion equation, L.A. Khan and P.L.-F. Liu 337–359
- Wave motion*
- Large-scale simulation of elastic wave propagation in heterogeneous media on parallel computers, H. Bao, J. Bielak, O. Ghattas, L.F. Kallivokas, D.R. O'Hallaron, J.R. Shewchuk and J. Xu 85–102
- Modeling of electromagnetic absorption/scattering problems using *hp*-adaptive finite elements, L. Demkowicz and L. Vardapetyan 103–124
- A Galerkin-type BE-FE formulation for elasto-acoustic coupling, Z.S. Chen, G. Hofstetter and H.A. Mang 147–155
- Parallel processing for the simulation of problems involving scattering of electromagnetic waves, K. Morgan, P.J. Brookes, O. Hassan and N.P. Weatherill 999–999
- Highly accurate non-reflecting boundary conditions for finite element simulations of
